

Saturday 24**Quantum Information & Information Geometry**

Chair: Ercolessi / Facchi

9:00	F.M. Ciaglia	The space of quantum states, relative entropies and metric tensors
9:45	A. De Pasquale	A dynamical approach to noisy evolution
10:30		Coffee Break
10:30	G. Magnifico	Topological QED in 1+1 dimensions
11:00		Bound states and entanglement generation in waveguide quantum electrodynamics
11:45	D. Pomarico	
12:30		Lunch
15:00	F. Ciccarello	Open dynamics of a quantum system driven by a single photon
15:45	G. Scarpa	Computational complexity of PEPS zero testing
16:30		Coffee Break
16:30	L. Catani	Csirelson's bounds as a refinement of Landauer's principle
17:45		

Sunday 25**Quantum Information & Information Geometry**

Chair: Ercolessi / Facchi

9:00	S. Pascazio	Entanglement critical length at the many-body localization transition
9:45	D. Vodola	Twins Percolation for Qubit Losses in Topological Color Codes
10:30		Coffee Break
10:30	S. Pappalardi	Scrambling and entanglement spreading in long-range spin chains
11:00		
11:45	D. Rossini	Chiral edge modes and crystalline phases in atomic synthetic ladders
12:30		

Monday 26**Gravitational waves**

Chair: Ferrari / Gualtieri

9:30	P. Astone	Present results and future challenges with the network of gravitational wave detectors
10:05	S. Piranomonte	GW170817 optical/NIR follow-up observations: the first evidence of kilonovae existence
10:40	Coffee break	
11:05	W. Del Pozzo	Tests of general relativity from binary black hole coalescences
11:40	M. De Laurentis	Constraining alternative theories of gravity using GW150914 and GW151226
12:15	T. Abdelsalhin	Tidal deformations in inspiralling compact binary systems
12:15	F. Jimenez Forteza	Indistinguishability of high-PN tidal effects on BNS waveform models.
12:45	C. Pacilio	Quasinormal modes of general Einstein-Maxwell-dilaton theory
13:00		Lunch
14:30	R. Schneider	The formation and coalescence sites of the first gravitational wave events
15:05	F. Haardt	Massive black holes in galactic nuclei: dynamics, cosmic evolution and gravitational wave emission
15:40	Coffee break	
16:10	A. Maselli	Solving the relativistic inverse stellar problem through gravitational wave observations of binary neutron stars
16:45	A. Perego	Multimessenger constraints on the equation of state of neutron stars
17:20		

Tuesday 27**Topics in nonperturbative Quantum Field Theory**

Chair: Rosa / Percacci

9:00	V. Mastropietro	Anomalies, Constructive QFT and Universality in solid state physics
9:45	C. Dappiaggi	On the role of boundary conditions in the quantization of Bosonic field theories on AdS spacetime
10:30		Coffee Break
11:00	R. Percacci	Asymptotic safety
11:45	G.P. Vacca	Selected topics on the functional renormalization group and its applications
12:30		Lunch
		Chair: Vacca / Mastropietro
15:00	F. Siringo	Exploring Non-Perturbative QCD by Perturbation Theory: an Analytical Study of the Yang-Mills Sector in the IR
15:45	M. Panero	An overview of the lattice approach to strongly coupled quantum field theory
16:30		Coffee Break
16:30	F. Becattini	Thermodynamic equilibrium with acceleration and the Unruh effect
17:45	L. Petruzzello	On the role of neutrino mixing in accelerated proton decay
18:05	L. Smaldone	Dynamical generation of fermion mixing
18:05		

Wednesday 28**Cosmology and Theories of gravity**

Chair: Zerbini / Cianci / Scardigli

9:00	M. Della Valle	Probing the Transient Universe with Supernovae, Hypernovae and Kilonovae in the GWs era
9:30	G. Covone	Is Dark Matter really collisionless? Recent insights from astronomical observations
10:00		Test-particle dynamics in general spherically symmetric black hole spacetimes
10:00	M. De Laurentis	

Wednesday 28

Cosmology and Theories of gravity

Chair: Zerbini / Cianci / Scardigli

10:30	L. Amati	THESEUS mission
11:00		
11:00		Coffee Break
11:30	L. Fatibene	Observability and tests in Palatini $f(R)$ -theories
12:00		
12:00	R. Giambò	Black holes from gravitational waves
12:30		
12:30	A. Mazumdar	Singularity free, Ghost free & Infinite derivative gravity
13:00		
		Lunch
14:30	M. Rinaldi	Scale-invariant gravity and inflation
15:00		
15:00	P. Mastrolia	Diagrammatic approach to the gravitational two-body dynamics
15:30		
15:30	G. Esposito	Looking for a new test of general relativity in the solar system. I/II
16:00	A. Tartaglia	
16:00	E. Piedipalumbo	Cosmology with high redshift distance probes: A Gamma-Ray Bursts and Quasars Hubble diagram
16:30		
16:30		Coffee Break
17:00		
17:00	L. Sebastiani	Action growth for static black holes in modified gravity
17:30		
17:30	C. Stornaiolo	Tomographic analysis of the quantum cosmological models of the de Sitter universes
18:00		
18:00	L. Buoninfante	Insights into infinite derivative gravity from curvature tensors
18:20		
18:20	G. Harmsen	Quasinormal modes for spin-3/2 fields near an N -dimensional Reissner-Nordstrom black hole.
18:40		
18:40	F. Di Filippo	Minimally modified theories of gravity: a playground for testing the uniqueness of general relativity
19:00		
19:00	R. D'Agostino	Cosmic acceleration from Anton-Schmidt's equation of state
19:20		
19:20	O. Luongo	TBA
19:30		

PAFT 2018 Problemi Attuali di Fisica Teorica

Current Problems in Theoretical Physics

Quantum Mechanics, Fields, Gravity, Cosmology, Gravitational waves

XXIV Edition - March 24 - 28, 2018

Lloyd's Baia Hotel- Vietri sul Mare (Italy)

24 - 25 March

Quantum Information & Information Geometry

Chairpersons: E. Ercolessi, P. Facchi

26 March

Gravitational waves

Chairpersons: V. Ferrari, L. Gualtieri

27 March

Topics in non perturbative Quantum Field Theory

Chairperson: L. Rosa

28 March

Cosmology and Theories of gravity

Chairperson: S. Capozziello
